Performance & SEO:

Core Web Vitals | Chrome DevTools | SEO optimization | Google Analytics

Backend & CMS:

Node.js | REST APIs | Firebase | Strapi | WordPress

Tools:

Git/GitHub | Figma | Vite | Vercel

Experience

Full-Stack Developer (Contract) - Sollas

10/2023 - Present · Remote

Project-based work for a design agency, mostly solo, from design hand-off to production.

- Kept ppc.io running solo for ~22 months: 96 tool pages from one template, two home page rebuilds, moved content from Strapi to typed Astro collections.
- Built sollas.co in Next.js from Figma to deploy and own its SEO, with checks after every deploy.
- Built Backlinks solo in ~6 weeks: Next.js front end with 24 section types on Strapi CMS.
- Built the front end of a real-time crypto and finance dashboard in Next.js and TypeScript (under NDA).
- Sole developer of Answerly, a startup product: real-time chat, sign-up and auth, Stripe Checkout and Connect with payouts and webhooks (React, Node.js, Firebase).
- Added pages to established WordPress sites, including The HOTH and Authority Builders.

Front-End Developer (Contract) - Metamorfosi Agency (client: Bold, UK)

06/2024 - 05/2026 · Remote

- Shipped 25+ marketing sites as part of an agency team, one or two a week.
- Built pixel-perfect pages from Figma with HTML, PostCSS and JavaScript, connected to the client's custom PHP CMS.
- Examples: boldgrp.io, axiomasearch.com, lechley.com.

Freelance Front-End Developer

03/2023 - 10/2023 · Remote

- Built front-ends, forms and landing pages for client websites.
- Improved loading speed and SEO setup.
- Built and hosted a WordPress site.

Selected Projects

PPC.io

- Astro, React, TypeScript, Tailwind CSS, MDX
- Marketing site and free tools library for a PPC agency, solo for ~22 months. Library grew from 19 to ~78 tools; moved off Strapi to typed content collections.

Keyline · keyline.italik.dev

- Next.js, TypeScript, Tailwind CSS, MCP SDK, Anthropic API
- Editor for code animations with AI. Users select elements on the canvas, describe what should move or change, and the agent edits only that part. Everything stays editable by hand. Live since October 2026.

Lottie Theme · lottie.italik.dev · open source

- Next.js, TypeScript, Zustand, MCP SDK, Anthropic SDK, GitHub Actions
- Turns dark Lottie animations into light ones. Web editor, CLI on npm and an MCP server (12 tools) over one shared core. An agent can recolour a file and render it to check the result.

Money Track · money.italik.dev · open source

- React, TypeScript, Cloudflare Workers, Durable Objects, D1, Hono, Anthropic API
- AI finance app where the model never computes a number: every figure comes from SQL, and a check blocks any number not taken from the database. A model cascade reached ~97% categorisation accuracy at ~80% lower AI cost. Bank sync, a separate database per user, an MCP server with OAuth 2.1, Telegram bot. Live demo: money.italik.dev/demo
