VITALIY HRYTSENKO

Full-Stack Developer (React, Next.js, Node.js)

github.com/ITalik-gr | italik.dev/fullstack | Kyiv, Ukraine

+380973080155 | italik.gr@gmail.com | t.me/ITalik_gr

Summary

Full-stack developer with 3+ years of commercial experience: React and Next.js in TypeScript on the front, Node.js, NestJS and PostgreSQL on the back. Was the sole developer of a startup product with Stripe payments and payouts. Recently launched Keyline, a SaaS for code animations, and runs other projects on Cloudflare Workers, adding AI where it helps: agents, MCP servers, answers grounded in real data.

Skills

Languages:

TypeScript | JavaScript | HTML5 | CSS3

Backend:

Node.js | NestJS | Hono | Express | REST API | JWT authentication | webhooks | WebSockets | Anthropic API

Databases:

PostgreSQL | Cloudflare D1 | Drizzle | Prisma | MongoDB | Supabase | Firebase

Frontend:

React | Next.js | Astro | Tailwind CSS | Redux | MobX | TanStack Query

Integrations & CMS:

Stripe (Checkout, Connect) | third-party APIs | Strapi | WordPress

Tools:

Git/GitHub | Figma | Cloudflare Workers | Vercel

Experience

Full-Stack Developer (Contract) - Sollas

10/2023 - Present · Remote

Project-based work for a design agency, mostly solo, from design hand-off to production.

- Sole developer of Answerly, a startup product: real-time chat, sign-up and auth, Stripe Checkout and Connect with payouts and webhooks (React, Node.js, Firebase).
- Kept ppc.io running solo for ~22 months: 96 tool pages from one template, two home page rebuilds, moved content from Strapi to typed Astro collections.
- Built Backlinks solo in ~6 weeks: Next.js front end with 24 section types on Strapi CMS.
- Built the front end of a real-time crypto and finance dashboard in Next.js and TypeScript (under NDA).
- Built sollas.co in Next.js from Figma to deploy and own its SEO, with checks after every deploy.
- Added pages to established WordPress sites, including The HOTH and Authority Builders.

Front-End Developer (Contract) - Metamorfosi Agency (client: Bold, UK)

06/2024 - 05/2026 · Remote

- Shipped 25+ marketing sites as part of an agency team, one or two a week.
- Built pixel-perfect pages from Figma with HTML, PostCSS and JavaScript, connected to the client's custom PHP CMS.
- Examples: boldgrp.io, axiomasearch.com, lechley.com.

Freelance Front-End Developer

03/2023 - 10/2023 · Remote

- Built front-ends, forms and landing pages for client websites.
- Improved loading speed and SEO setup.
- Built and hosted a WordPress site.

Selected Projects

Keyline · keyline.italik.dev

- Next.js, TypeScript, Tailwind CSS, MCP SDK, Anthropic API
- SaaS for building code animations with AI, taken solo from spec to launch. Users pick elements, describe the change to an agent, and adjust the rest by hand. Connects to the user’s own Claude through MCP.

Money Track · money.italik.dev · open source

- React, TypeScript, Cloudflare Workers, Durable Objects, D1, Hono, Anthropic API
- AI finance app where the model never computes a number: every figure comes from SQL, and a check blocks any number not taken from the database. A model cascade reached ~97% categorisation accuracy at ~80% lower AI cost. Bank sync, a separate database per user, an MCP server with OAuth 2.1, Telegram bot. Live demo: money.italik.dev/demo

Lottie Theme · lottie.italik.dev · open source

- Next.js, TypeScript, Zustand, MCP SDK, Anthropic SDK, GitHub Actions
- Turns dark Lottie animations into light ones. Web editor, CLI on npm and an MCP server (12 tools) over one shared core. An agent can recolour a file and render it to check the result.

Telegram AI Assistant

- TypeScript, Cloudflare Workers, grammY, D1, Vectorize, xAI Grok
- Group chat bot with summaries and semantic memory. Code checks before each model call cut running cost from $75-150 to $3-6 a month.

Education

Master's in History Education (in progress) · Oleksandr Dovzhenko Hlukhiv National Pedagogical University, 2021 - present
