Experience

Full-Stack Developer (Contract) - Sollas

10/2023 - Present · Remote

Project-based work for a design agency, mostly solo, from design hand-off to production.

- Sole developer of Answerly, a startup product: real-time chat, sign-up and auth, Stripe Checkout and Connect with payouts and webhooks (React, Node.js, Firebase).
- Kept ppc.io running solo for ~22 months: 96 tool pages from one template, two home page rebuilds, moved content from Strapi to typed Astro collections.
- Built the front end of a real-time crypto and finance dashboard in Next.js and TypeScript (under NDA).
- Built sollas.co in Next.js from Figma to deploy and own its SEO, with checks after every deploy.
- Built Backlinks solo in ~6 weeks: Next.js front end with 24 section types on Strapi CMS.
- Added pages to established WordPress sites, including The HOTH and Authority Builders.

Front-End Developer (Contract) - Metamorfosi Agency (client: Bold, UK)

06/2024 - 05/2026 · Remote

- Shipped 25+ marketing sites as part of an agency team, one or two a week.
- Built pixel-perfect pages from Figma with HTML, PostCSS and JavaScript, connected to the client's custom PHP CMS.
- Examples: boldgrp.io, axiomasearch.com, lechley.com.

Freelance Front-End Developer

03/2023 - 10/2023 · Remote

- Built front-ends, forms and landing pages for client websites.
- Improved loading speed and SEO setup.
- Built and hosted a WordPress site.

Selected Projects

Money Track · money.italik.dev · open source

- React, TypeScript, Cloudflare Workers, Durable Objects, D1, Hono, Anthropic API
- AI finance app where the model never computes a number: every figure comes from SQL, and a check blocks any number not taken from the database. A model cascade reached ~97% categorisation accuracy at ~80% lower AI cost. Bank sync, a separate database per user, an MCP server with OAuth 2.1, Telegram bot. Live demo: money.italik.dev/demo

Lottie Theme · lottie.italik.dev · open source

- Next.js, TypeScript, Zustand, MCP SDK, Anthropic SDK, GitHub Actions
- Turns dark Lottie animations into light ones. Web editor, CLI on npm and an MCP server (12 tools) over one shared core. An agent can recolour a file and render it to check the result.

Telegram AI Assistant

- TypeScript, Cloudflare Workers, grammY, D1, Vectorize, xAI Grok
- Group chat bot with summaries and semantic memory. Code checks before each model call cut running cost from \$75-150 to \$3-6 a month.

Job Radar · github.com/ITalik-gr/job-radar

- TypeScript, Hono, Drizzle, Cloudflare Workers, D1, React
- Job search tool: code filters and scores listings, the model only reads new text and drafts one paragraph. AI cost went from ~\$15 to \$1-2 a month.
